Samarth Arun Narula

Technical AI DevOps Cloud Architect with Hands on | GCP 3X Professional Certified | AWS 4X | Distinguished Engineer | Full Stack AI Developer

Transforming complex challenges into groundbreaking solutions, startup scaler and enterprise enhancer. I accept the challenges others avoid, bringing deep technical expertise and relentless drive. From complex projects to cutting-edge tech, I deliver transformative solutions under pressure. Ready to turn your toughest challenges into your biggest wins.

SKILLS

- Terraform, Cloud Formation, Pulumi, Ansible, Crossplane
- Running Standup, managing JIRA Boards and Team
- Cloud IAM and Network Architecture, Cybersecurity
- Java, scala, Spring Boot, Spring Batch, Spring Security, Spring Cloud, JPA, Hibernate, AOP, Microservice Design Patterns
- RESTful Web Services, Event Driven Architecture, Camunda BPMN and DMN
- Maven, Gradle
- Monitoring: Grafana, Prometheus,ELK,cloudwatch, splunk, Kibana, Datadog
- Bitbucket, Github & Gitlab CICD,DevOps
- Kafka & RabbitMQ
- Data Formats: Json, parquet, csv, avro, delta
- ArgoCD, Argo Workflows, Argo Rollouts
- Spark, Flink, Airflow, DBT, Data Governance, MySQL, PL SQL, Microsoft SQL
- AWS EC2, EMR,S3, Step function, Glue,DynamoDB, Redshift,EKS, Lambda, AWS Connect, AWS Lex & AWS Recognition, Polly, Textract, Translate, Transcribe
- Atlassian Suite : JIRA, Confluence, Bitbucket
- Visualization, Quicksights, Looker, Power BI
- Google Cloud (GCP): BigQuery, Cloud SQL, Shared VPC, Networking
- python, Unix and linux, shell scripting, Bash
- Stakeholder Management, Project Management
- Customer Data Platform Architecture (CDP), Cloud Migration Strategy
- Docker,Kubernetes(GKE), Helm
- Data Catalogs: Atlan, Collibra, GCP Data Catalog
- SQL, MySQL, PL SQL & NoSQL, Graph DB, Redis
- Technical Architecture and Design Document, Evaluate SAAS Tool Vendors
- AI/ML, Generative AI, MLOP
- Prophecy, SAAS, Informatica, snowflake, Splunk
- yaml, json, parquet
- ETL Dataware housing, BigQuery, Datalake, BigLake, Pyspark
- MongoDB, Cassendra
- React, Material UI library

WORK EXPERIENCE

Independent Consultant & Senior AI Devops Engineer
Narula Cloud and AI Consulting (Client: Precisely, PM: Uplers)

05/2026 - Present *mumbai, India*

Precisely is a Data AI Integrity SAAS Solution Company

Achievements/Tasks

- Architected and developed an enterprise-scale Agentic AI CI/CD Auto-Remediation Framework leveraging 15 specialized AI agents, hybrid LLM/deterministic reasoning, RAG with vector databases, and custom MCP integrations with Jenkins and Bitbucket to automate build-failure analysis, root-cause detection, code-fix generation, branch/PR creation, and pipeline validation. Incorporated AI evaluation, human-in-the-loop approvals, concurrent processing, intelligent retries, and configurable timeouts to enhance CI/CD reliability, accelerate failure resolution, and enable self-healing DevOps workflows.
- Architected and implemented a scalable Jenkins Agent Containerization POC, evaluating SSH, JNLP, and WebSocket connectivity; built Docker images, integrated JFrog Artifactory, and modified Jenkins Pipeline DSL to execute builds within containers. Designed reusable container images across heterogeneous repositories to improve CI/CD scalability, standardization, and maintainability. Modernized and containerized enterprise CI/CD pipelines across Java, Gradle, Ant, Maven, React, Node.js, Angular, ASP.NET, and .NET Core applications. Provisioned a Docker-Windows-based GitLab Runner to containerize ASP.NET build stages, leveraged GitHub Copilot and Bitbucket MCP for AI-assisted architecture and repository analysis, and implemented DLL artifact count and version verification using Azure File Storage.
- **AIFinOps Built Copilot Intelligence Dashboard** by consolidating Excel and JSON usage data into unified adoption and productivity insights.
- Built an **AI-powered CI/CD Pipeline Analyzer** using Python, Streamlit, GitHub Copilot CLI, and prompt engineering. Automated reviews for GitLab CI, Jenkins, and GitHub Actions pipelines, including scoring, optimization suggestions, and downloadable reports.
- Integrated GitLab Merge Requests with TeamCity to trigger builds, display build status, and block merges when pipelines failed. Configured Jenkins pipelines to fail builds when code coverage dropped below configurable thresholds.
- Project Initiative(builded 1 version for all major products like Connect ETL, Connect CDC, Connect Data, Automate, GeoCoding, Spectrm etc): Forward Release branch feature utility, since the client is migrating from JIRA to Linear tracking tool, the old utility builded by other teammate was for JIRA, using copilot I have builded for Linear using the similar comparison logic, this utility builds reports which helps understand if some features were missed in new release. I builded this tool variations with different strategies like native release based, Project based, and Label based different options basis on how different teams use it. Tech Stack: Python and its libraries: requests, openpyxl, PyYAML,customtkinter for building UI, pyJWT, cryptography etc.
- Strengthened CI/CD resilience and DevSecOps capabilities for Connect ETL, a large-scale legacy enterprise product, by optimizing build retry mechanisms, notifications, artifact management, and agent cleanup. Enhanced cross-platform digital signing workflows for Windows and RHEL, assessed signing compatibility across HP-UX, Solaris, and AIX, and integrated GitHub CodeQL security scanning into Java CI/CD workflows.
- Optimising AWS EC2 Compute Code for Jenkins Build Runners Machines by stopping EC2 when not in use by writing advance automation logic.

Cloud Architect
Cyberender LLC

05/2024 - 04/2026 *Richmond, VA, United States*

IT Consulting + Product Based Company

Achievements/Tasks

- **Cloud Solutions:** Designed multi-cloud architecture integrating AWS & GCP services for scalable data platforms, Builded Data Lakes using medallion architecture.
- **AI Powered productivity tools:** Built Cybersecurity Product to automate fixing vulnerabilities, Access to use multiple AI tools premium subscriptions like Github Copilot, Google Gemini, ChatGPT.
- **GitOps:** Argo Products like ArgoCD, Argo Workflows, Argo Rollouts and DevOps: Create or Optimize CICD deployment pipelines and SecOps: Collaborating with Security Team to ensure Cloud Security. Stopping active cyber attacks on GCP Cloud
- Translating client requirements into technical deliverables and create JIRA EPIC and stories for other engineers and myself also, ITSM process, Incident management, **IAM key rotation**, Maintain VPC networking, Maintain VPC networking, Cloud Cost Optimization, Conduct & Perform RCA and implement fixes.

WORK EXPERIENCE

- Assist with **Cloud Migration Strategy**, Create and optimize Release Management Systems, Setup and manage GCP GKE clusters, Debug and fix GCP service related issues for other teams, Convert Business Requirement Document to Platform Architecture Document and Platform Architecture Document to Solution Architecture Document and Solution component to executable task for platform engineers.
- **Strategic Leadership & Architecture:** Led teams in Platform/Application Development, Data, and DevOps. Developed DR/BC plans, conducted Cloud QA, and evaluated SAAS products. Created POCs, MVPs, and critical documents (Feature Evaluation, Competitive Analysis, SOPs, Business Justification). Designed Cloud, Data, Application, Microservice, and Low Code architectures.
- **Full-Stack Solution Development** : Translated business problems into web app solutions. Led UI/UX design, stakeholder approvals, team building, and product development. Managed full deployment cycle, including stakeholder demos and end-user presentations. Provided team member feedback and performance evaluations. Builded Data-Loader from Confluent kafka to AWS RDS Postgres within 1 day with by using Github Copilot, Builded API Spec and published to public portal of client

Technical Architect Team Lead (hands on) (Client: Deutsche Telekom)
Pixeldust Technologies

12/2022 - 05/2024 *Mumbai, India*

Technical Architect at Pixeldust: Overseeing cloud and data projects. Collaborate with stakeholders on client side for key initiatives.

Achievements/Tasks

- **Cloud Transformation Leader**: Spearheaded on-prem to GCP migrations, architecting innovative solutions in Cloud, DevOps, and Low Code. Led global team of 55 engineers, driving Hadoop-GCP transitions and SAAS deployments. Designed multi-cloud architectures (GCP/AWS/Kubeflow), ensuring on-time delivery through strategic KPI monitoring and cross-functional collaboration.
- **Skills:** GCP, AWS, Kubernetes, CI/CD, Terraform, Microservices, IAM, Prophecy.io, Spring Boot, Docker, Helm, Spark, Flink, Kafka, Generative AI, Argo CD/Workflows, Pulumi, Crossplane, Cloud Migration, Hadoop, Team Leadership, Project Management, BigQuery, Dataproc, Dataplex, Kubeflow, MLOps, AAD SSO, ETL, Java, Python, Splunk
- **Designed CDP for 31,000 users in telecom**. Evaluated Low Code SaaS tools, proposed Data Architecture Solutions. Led CICD migration to GitLab pipelines from Jenkins, GitHub Workflows, and AWS CICD. Created reusable GitLab templates and Terraform modules for efficiency.
- Implemented enterprise data solutions on GCP. Designed Data **Lakehouse using Medallion Architecture**. Managed Kubeflow MLOps, Kubernetes multi-tenancy, and microservices architecture. Integrated MicroStrategy and established data governance.
- Led GCP GKE setup, ETL pipeline development, and ML workflow evaluation. **Managed a 10-member team** for **Prophecy deployment on GCP GKE**, implementing CI/CD and SSO with Azure AD. Configured Low-Code Airflow, designed PySpark architecture, and showcased Generative AI features. Drove ETL development with Prophecy Gems and led adoption.
- **Developed and deployed a Table Classification web app** using GCP, OpenAI, Java, Spring Boot, and Figma, React, neo4j, leading a cross-functional team, managing DevOps, AI integration, and compliance for 32k tables ingestion from on-prem to cloud, **Received client recognition on 7th March 2024 during Google Meetup**.

Principal Software Engineer / Full Stack Microservice Cloud DevOps Enterprise Architect
Atlan (Extremely Fast paced SAAS Product Startup Company)

04/2022 - 11/2022 *Remote*

About the company: Atlan: Data teams' collaborative workspace, like Github for engineers, HubSpot for sales, Figma for designers.

Achievements/Tasks

- Plan engineering strategies.Improve processes.Manage research, design.Provide expert advice.Set goals, make plans.Manage budgets, tools.Enhance processes.Architect, lead, execute. **Lead 30 Engineers.**
- **Project : Silo Multi-Tenant Model Setup on Customer AWS Account with Automation** : Architected automated Atlan product installation in customer AWS accounts using CloudFormation, Argo workflows, and Java Lambda functions. Led 3 engineers to success in 74 days, implementing Loft VCluster setup and Atlan deployment. Tech Stack: AWS, Kubernetes, Docker, Helm, Argo CD/Workflows, GitHub Actions, Java, Loft VCluster, Redis, Kafka, Flink, Generative AI
- **Project: AWS Cost Optimization:** 1. Identified cost issues using AWS QuickSight. 2. Collaborated with AWS experts, attended cost optimization seminars. **Cut $800/day by turning off EKS Dev CloudWatch Logs. Brought down monthly cost from 250k$ to only 50k$.** 3. Advised: Update EKS nodes to AMD processors, move to spot instances via Terraform. Optimize logging, migrate Lambda to ARM architecture. 4. Delegated tasks, ensured execution. **Achieved in first quarter, leading 10 engineers.**
- **Project: Optimize Release Management Process** Identified current release process issues. Then proposed use of ECR for Image and Helm repo, VPC strategies. Wrote CICD scripts, semantic versioning. Designed rollback, deployment strategies.

WORK EXPERIENCE

- As a Principal Software Engineer conducted provided Ramp up sessions to new joiners in company, guided and helped other Junior Engineers in various areas of technology and our product. **Also at times setup alot of infra on AWS using different AWS Services. Locations Traveled in India (Office Meetups): Bangalore, Delhi, Dharmshala & Locations Travelled out of India: UAE & Singapore.**

Senior Software Engineer / Full Stack Microservice Cloud DevOps Architect
Here Solutions India Private Limited

08/2020 - 03/2022 *Mumbai. India*

Maps company, has many different products that provides map data in different formats and visualizations to individuals and other companies

Achievements/Tasks

- Started as Software Engineer II within one year of joining got promoted to Senior Software Engineer. Led project creation, setup, and guidance for teams and vendors worldwide.
- **HDMaps product:** Developed Java and python AWS Utilities (S3 storage, microservice integration) & EFCS(Earthcore Feature conflation services) Product: DevOps for ECS clusters, EC2 management, EKS Clusters, snapshots with Terraform, Cloud Formation & Jenkins triggers.
- **Wall-E Lanes Product:** Built ETL projects, deployed on AWS, managed pipelines in Gitlab. Developed PACT, handed to vendors for maintenance.
- **Development Technologies:** Used Java, Scala, Flink & Spark for parallelism. Redis for caching. Utilized Prometheus, Grafana for monitoring. AKKA, Protobuf. Employed Kubernetes, Helm, Docker, Gitlab, Jenkins for DevOps. Leveraged Docker Compose, Terraform for operations. Utilized various AWS, GCP services(GKE, GCS, VPC), Gitlab, Jenkins for pipelines, In-house AI products usage for geo-spatial point cloud sensor (Lidar Sensor) collected data correction.
- After doing all of the above task got promoted to Senior Software Engineer within 1 year of joining the organization.
- **As a Senior Engineer:** Took Interviews, onboarded, guided peers. Created project environments, managed GitLab, OLP access. Requested and managed AWS, GCP, Azure account access for teammates.
- Also worked on **cutting edge in-house initiates** like Parallel Environments , orchestration Framework, Archival Tool and many more and turned into a leader for these initiatives. A lead who leads by example.

Staff Consultant / Senior Java Developer
Oracle Financial Services (Product & Service Based Company)

12/2019 - 08/2020 *Mumbai*

Achievements/Tasks

- Worked as a Senior Java Developer for OFSS **client State Street Bank.**
- Spring Boot, Kafka, AWS and GCP services., Micro-service Patterns, Observability, Chaos testing, Disaster Recovery, Redistribution, Redis on GKE, Cloud AI Services, Argo CD/Workflows, Crossplane, Pulumi, Camunda BPMN and DMN
- **Responsibility:** At State Street, I as Senior Java Dev wrote algorithms to process data for traders and portfolio managers, loading into Oracle DB and flat files. Fix Protocol, Created API to fetch data from Bloomberg Screens by using nmemonics
- **Innovation:** Migrated legacy monoliths to microservices, resolved DB issues with JPA & Hibernate. Applied design patterns, enhanced resilience with Lombok.

Software Engineer
Accenture : Goldman Sachs and MasterCard Clients

11/2017 - 12/2019 *Mumbai, India*

Achievements/Tasks

- **Goldman Sachs Client:** I served as Full Stack Developer on Trader Mandate Application which helped bank remain regulatory compliance with **volcker rule which was announced by President Barack Obama**. Took tech ownership for development, support, automation. Used Java, Spring boot, Camunda BPMN and DMN, SQL, Angular, Jenkins, AWS, Redis, GCP, Splunk etc. Implemented Volcker Rule.
- **MasterCard Client:** Helped Accenture in getting this client and **getting the 700 core INR contract** by doing initial MVP, then completed the Dynamic Framework product.For building product Integrated Spring Boot with Camunda BPMN and DMN, used JPA, Hibernate, Spring Security, deployed to PCF & Mongo Atlas. Enhanced onboarding via web tech in Dynamic Framework.After Getting the client, delivered the entire Greenfield Project

WORK EXPERIENCE

- **BBH Client POC:** Case study on use of Qlik Sense Desktop over Angular High Chart for the requirement of dynamic info-graph generation, business purpose for the decision making of HNI portfolio investments.

CERTIFICATES

Google Cloud Certified Professional Cloud Architect (05/2023 - 05/2025)

https://google.accredible.com/cf0cde18-e1b1-436a-90f5-c8f878371e03

Google Professional Machine Learning Engineer Certification (12/2024 - 12/2027)

https://www.credly.com/badges/fc55965b-60a7-49ad-a44e-d7925a98ef0e

Google Professional Cloud Security Engineer Certification (12/2024 - 12/2026)

https://www.credly.com/earner/earned/badge/5691bba5-aba6-4f3f-a05f-6605f40bda6b

AWS Certified Security – Specialty (12/2024 - 12/2027)

https://www.credly.com/badges/15dabc3a-9608-4571-819-20a87cd09991/public_url

AWS Certified Solutions Architect – Professional (11/2024 - 11/2027)

https://www.credly.com/badges/9e688b07-1d1e-4dfc-b35d-41f05e452671/linked_in_profile

AWS Certified Machine Learning – Specialty (11/2024 - 11/2027)

https://www.credly.com/badges/8b8d5d6a-936c-4898-b564-7cc9a7d2a339/linked_in_profile

AWS Certified DevOps Engineer – Professional (11/2024 - 11/2027)

https://www.credly.com/badges/b4e41d40-aedc-4698-b187-942252955c5a/linked_in_profile

Software Architecture: Domain-Driven Design (06/2020 - Present)

Accenture Green Field Industrial 4 months Training and Exams Program (02/2018 - Present)

PUBLICATIONS

Technical Courses

Udemy & Coursera Course Publisher Profile

2020

https://www.udemy.com/user/samarth-narula-3/

https://www.coursera.org/instructor/samarth-narula

I am publisher of top rated technical courses based on Java Design Patterns and Spring Boot Framework.

Technical Blogs

Medium Technical Blog Publisher Profile

2023

https://medium.com/@samarthnarula13

I have written multiple technical blogs from my industry learnings while working and architecting with multiple cutting edge technology tools, frameworks and ecosystems.

Publication Type

Github Action on Marketplace: AI PR Reviewer

2025

https://github.com/marketplace/actions/github-pr-review-agent

GitHub Action that leverages the Perplexity API to provide AI-powered pull request reviews. This action simplifies the review process by analyzing the changes and offering insightful feedback.

EDUCATION

BE in Information Technology
Mumbai University
05/2013 - 05/2017, First Class Grade

PERSONAL PROJECTS

AI Finance Analyst (02/2025 - Present)

- **AI Finance Analyst using AI Agentic Workflow**, integrating Yahoo Finance and DuckDuckGo for sentiment analysis and forecasting all types of financial instruments and globally and does many more things, has RAG integrated for latest data fetch and feed to ML Model.
- Github Repo Link: https://github.com/sam253narula/AIFinanceAnalyst

ThinkDB IDE Product (05/2026 - Present)

- Builded a NLP to DB Query Language AI Converter, to optimize time it take for bussiness executives to get Valuable data from DB via human flow of BA to DBA to BA to them. Also added Saftly gaurdrails to prevent Update and deletion. Currently supports SQL and NoSQL, can be extended for BigQuery ot any data storage of choice

Youtube Summarizer (03/2025 - Present)

- **YouTube Transcript Summarizer** is a Python-based tool that extracts subtitles from a YouTube video and generates a concise summary using the Perplexity API.
- Github Repo Link: https://github.com/sam253narula/AIYoutubesummarizer

Instagram Manager API based Product (08/2020 - Present)

- Features of this product are: Get a list of people you follow and who don't follow you . Get list of people who you don't follow and they follow you . Get username list of followers and following for your accounts using API if you want to do some RND.
- **Future Scope:** Bulk Follow user accounts in a click. Bulk unfollow user accounts in a click. Single Follow or unfollow with just username in a click. Follow some other users all followers or following in a click. Download all images of a user in a click.
